

SolSwitch™

Multi-Tenant and Carrier Platform

Overview

Sunwire’s SolSwitch Multi-Tenant and Carrier Platform is a partner type of those who purchase their own SolSwitch equipment and wish to build their own infrastructure. SolSwitch owners can then offer hosted services to customers on their appliance. Perfect for buildings looking to offer phone service to tenants and make some extra revenue.

The following features allow you to do this:

Customer Management: Have the ability to add, edit, remove, host or oversee multiple customers running off a switch.

9-1-1 Service Provider Integration: Re-assure your customers by having 9-1-1 integration for hosted clients.

Customer Call Reports: A report outlining existing customers as well as their call usage levels.

Toll Plan Management: Manage your long distance regions and toll rates along with rate plans for your customers.

Toll Reporting: Get customer reports regarding their toll plans as well as reports concerning long distance calling.

Multi-Tenant and Carrier Platform partners receive the ability to manage and host their own customers as well as bill, configure, install, train and support these new clients. Partners can also set their own toll free and long distance rates for their customers.

Sunwire will provide guidance and direction to all partners as well as provide support and software updates.

Find out more about how this add-on can make your phone system work for you. Contact our team today!
